- 1. VEB Carl Zeiss, Jena, at present has a total capacity for the production of field classes of about fifteen million DME per year. At the utmost, this capacity can be increased to eighteen million DME based on the average production costs of field classes, the sum of fifteen million DME corresponds to about 90,000 field classes.
- 2. The 1954 plan of the enterprise provides for the production of 135,000 field glasses. This quota was established in spite of warnings by 350 the firm's management that the increase over 1953 production was not warranted on the basis of purchase orders and in uiries received most far, particularly during the Leipzig Fall Fair. After the Leipzigo Fair, the management expects the sale of about 50,000 field glasses abroad in 1954 and of about the same amount in East Germany. The same 1954 production quota of field glasses was nevertheless forced on the plant by the planning authorities.
